

## **FOR IMMEDIATE RELEASE**

Contact: Candi Johnson Valued Professional Products, Melissa Lauermann Ekotek Global

**Edmonton, Alberta-Lively, Ontario** (May 1, 2008) – Valued Professional Products Ltd.([www.valuedmed.ca](http://www.valuedmed.ca)) announced today an agreement for exclusive distribution of Ekotek Global Inc. products in the province of Alberta. Managing human waste in the healthcare environment and its influence in infection control is a monumental challenge. The emphasis to quality assurance in reprocessing instruments, safe working routines, and patient safety are all critical factors when choosing appropriate infection control equipment. The DEKO washer disinfectors are designed to meet the highest standards for safe healthcare practices.

The DEKO 190 ward disinfectant is a microprocessor controlled washing and thermal disinfection machine used for several reusable items. The inimitable **water circulation washing principle** results in outstanding washing capabilities that cannot be matched by flusher disinfectors, while securing minimum usage of water and energy.

Valued's commitment in the Alberta and Canadian marketplace for Long-term and acute healthcare is an excellent fit for Ekotek to market their DEKO line of processors. Both companies feel this product in use exhibits the Government of Alberta's attendance and implementation of new practices for the delivery of the highest quality of infection control within the province. The DEKO 190 Washer also addresses the tremendous environmental advantage in its working processes.
